***Examiner's Amendment***

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

This examiner's amendment rewrites claim 1 in a clean version format as follows:

-- 1. (Previously Presented) A replaceable ink container for providing ink to an inkjet printing system, the inkjet printing system having a receiving station for receiving the replaceable ink container, the receiving station having a fluid inlet and a sealing structure around the fluid inlet, the replaceable ink container comprising:

a reservoir defining a fluid outlet and a sealing surface configured for engaging the sealing structure proximate the fluid outlet, wherein the fluid outlet is configured to allow passage of the fluid inlet into the reservoir, and wherein the engaged sealing surface and sealing structure define a groove therebetween; and

a sealing material contained within the reservoir for wetting the sealing surface, the sealing material including solid particles held in a suspension, solidification of the solid particles at least partially in the groove between the sealing surface and the sealing structure acting to seal defects between the sealing surface and the sealing structure. —

***Reasons for Allowance***

2. The combination or method as claimed wherein solidifying the sealing material at least partially in a groove in the sealing structure or between the sealing surface and the sealing structure (claims 1, 7, 10, 16) is not disclosed, suggested, or made obvious by the prior art of record.

Olsen (US 6,644,796) discloses a printing system (Fig. 8) comprising a sealing structure (102a). However, Olsen does not disclose a groove in the sealing structure or between the sealing surface and the sealing structure. Thus, Olsen does not disclose solidifying the sealing material at least partially in a groove in the sealing structure or between the sealing surface and the sealing structure.
